

## **Developing an IET Syllabus: Key Elements**

This checklist can help Integrated Education and Training (IET) program providers and instructors develop a comprehensive, integrated syllabus that can serve as a roadmap for their IET students. It is essential to incorporate both the foundational elements necessary for any strong syllabus and the IET-specific elements that convey to students the unique goals, structure, expectations, and requirements of the IET program.

## Foundational Elements<sup>1</sup>

Does the syllabus include the foundational information students need to succeed in the course?

- 1. Learning objectives (what students will learn and take away from the course)
- 2. Basic information (course logistics, instructor contact information, office hours)
- 3. Course content (schedule, outline, meeting dates, major topics, and subtopics)
- 4. Student responsibilities (expectations, assignments, due dates, attendance/missed work policies)
- 5. Grading method (detailed description of assessment information and criteria)
- 6. Materials and access (required texts, equipment, tools, technology, and how to get them)

## **IET Elements**

Does the syllabus include the IET-specific information students need to succeed in the course?

- 1. Are the benefits of the integrated IET instructional approach made clear to students?
- 2. Is it clear that two instructors are teaching the integrated course/program (if applicable)? Is it clear what students can expect from each instructor, what each instructor's their roles are, and how they work together?
- 3. Is the syllabus written appropriately for and in language accessible to the intended adult learner audience?
- 4. Are the learning goals and outcomes integrated (i.e., reflective of the single set of learning objectives)?
- 5. Are the three required IET components identifiable (i.e., adult education and literacy, workforce training, and workforce preparation)? Are they offered concurrently and contextually?
- 6. Is the occupation and/or industry clearly identified? Is it clear which credential(s) are to be attained? Are the industry or occupational standards evident?
- 7. Are occupationally relevant materials referenced on the syllabus?
- 8. Does the syllabus describe support services available to learners?
